

Splash Screen

Your App's First Impression

What is a Splash Screen?

The splash screen is the first screen people see when they open your app. It tells the user what your app is, sets the mood, and gives a strong first impression.

Final Build Goal

Create a Splash Screen for your own app idea using SwiftUI. It should include:

- App Name (the title of your app)
- Tagline (a short sentence about what your app does or why it matters)
- Visual Identity (emoji, logo placeholder, color, or gradient background)
- Layout using VStack, HStack, or ZStack

Plan First

- Open your App Design Journal or 5W's worksheet.
- Decide on the app name and tagline.
- Plan your Splash Screen on Keynote or Freeform

Step 1: Project Creation

If you haven't yet create your personal app project :

Xcode > Create New Project > iOS App

- Product Name: YourAppName
- Interface: SwiftUI
- Language: Swift
- Disable Core Data, Tests, and storage options

Step 2: Build in Xcode

If you haven't yet create your personal app project :

In your ContentView or New SwiftUI View:

- Add your app name and tagline using Text.
- Design your background with a color, gradient, or shapes.
- Add a visual element (emoji or logo placeholder).

Step 3: Customize

- Change fonts, colors, and spacing to match your app's personality.
- Optional: Add a button or toggle for an interactive twist.

Step 4: Test & Share

- Run your splash screen in the Simulator.
- Be ready to show your screen to your peers, Teacher / Mentors.

Checklist Before You Finish

- ✓ My app name is on the screen
- ✓ I have a tagline that explains my idea
- ✓ I used at least one visual identity element (color/emoji/shape/logo)
- ✓ My layout looks intentional and clean
- ✓ (Optional) I added a simple interactive feature
